

## **ASX ANNOUNCEMENT AND MEDIA RELEASE**

**23rd September 2003**

### **JINGEMIA 3 PERTH BASIN, WESTERN AUSTRALIA PREPARING TO RUN WIRELINE LOGS**

Norwest Energy NL advises that at 6.00 am Western Standard Time today, the Jingemia 3 appraisal well was running wireline logs.

Jingemia 3 was sidetracked from the number 2 well bore to intersect the top Dongara Sandstone at a location approximately 400m to the north of the Jingemia 2 intersection. This sidetrack is designated to intersect improved reservoir quality from that intersected in Jingemia 2 and provide a point for water injection to provide reservoir pressure support.

Jingemia 3 appraisal well intersected the Dongara Sandstone reservoir at approximately 2420 metres true vertical depth. While this depth has still to be confirmed by wireline logs, it appears that the reservoir is about 26 meters low to Jingemia 1 and 40 metres high to Jingemia 2. On entering the Dongara Sandstone reservoir, 100% fluorescence was encountered. The fluorescence persisted for approximately 5 metres which equates with the most likely oil water contact identified in Jingemia 1.

Norwest Energy NL has a 1.278% interest in this well and the Jingemia Oil Field.

Norwest Energy NL will provide daily reports during drilling activities.

For and on behalf of
